MAD PROFESSOR - STONE GREY DISTORTION - OWNER'S MANUAL

The Mad Professor STONE GREY DISTORTION is a modern high gain distortion pedal with unparalleled clarity and definition.

This pedal was developed for high gain applications and specifically for clarity at heavy distortion levels.

The Stone Grey Distortion is unique in that it has razor sharp dynamics and high gain intensity. It's ready for drop tuning, 7 string, and modern rock players who are seeking extreme gain with intense "string to string definition".

Play a chord and hear each note distinctly, instead of it turning to "mush" like many other high gain pedals.

With the gain turned down, the Stone Grey Distortion approaches overdrive-like textures and responds to the player's touch and dynamics like our other Mad Professor pedals do.

The controls are:

- **VOLUME** sets the output level of the distorted signal
- **tone** sets the critical treble response for use with various amplifiers.
- **DISTORTION** sets the level of distortion
 - lower levels more overdrive-like textures
 - higher with heavier distortion.

CAUTION!

Never operate the unit with its bottom removed or damage will most likely occur.

ELECTRICAL SPECIFICATION:

- Input impedance approximately 500K
- Recommended Output Load 50K or higher
- Current consumption 8 mA at 9VDC
- Voltage supply range 7.5V to 15V
- Complete bypass (true bypass) and input of circuit grounded when in bypass.

POWER REQUIREMENTS:

6F22 9V battery or DC eliminator
2.1 mm plug center/negative and positive/sleeve.

NOTES:

The Stone Grey Distortion is protected against wrong DC eliminator polarity. Use recommended voltage for best results.
