MAD PROFESSOR - SWEET HONEY OVERDRIVE DELUXE - OWNER'S MANUAL

Thank you for buying a genuine premium quality Mad Professor Sweet Honey Overdrive Deluxe pedal.

The Mad Professor Sweet Honey Overdrive Deluxe (SHOD DLX) is a touch sensitive, medium gain overdrive pedal designed to overdrive distorted amplifiers and give dynamically controlled low to medium gain tones with clean amplifiers.

Our unique focus control allows you to adjust the feel and dynamics of the pedal as well as the overall EQ. Distortion levels are controlled by pick attack. Pick harder for more overdrive and play softer for cleaner tone. The SHOD DLX provides more versatility than the classic Sweet Honey Overdrive due to the added functionality of the new con-

trols. Both the SHOD and SHOD DLX are designed to work with all kinds of guitars and amplifiers.

Like all Mad Professor pedals the SHOD DLX is built using only premium components to provide years of trouble free operation with superb musical tone.

The controls are:

- **VOLUME**, sets the output volume.
- **DRIVE**, controls the amount of overdrive.
- **TREBLE**, post distortion, it cuts and/or boosts the treble.
- **BASS**, pre distortion, it sets how the bass and low mids are distorted.
- **FOCUS**, controls how easily the circuit distorts as well as adjusting overall EQ. Turning CCW gives less distortion and a mellow effect, turning CW gives a slight treble boost and earlier distortion. A good starting point is 11 o'clock.

CAUTION!

Never operate the unit with its bottom removed or damage will most likely occur.

Mad Professor Sweet Honey Overdrive Deluxe ELECTRICAL SPECIFICATION:

- Supply voltage range: 7.5 to 18VDC
- Current consumption at 9VDC: 6 mA
- Input impedance: 390K Ohms
- Output impedance: 25K Ohms
- Complete bypass (true bypass)

POWER REQUIREMENTS:

6F22 9V battery or DC eliminator 2.1 mm plug center negative and positive sleeve.
