

NOTES:

Tiny Orange Phaser is protected against wrong DC eliminator polarity. Use recommended voltage for best results.

The manufacturer claims that the above mentioned product fulfills the requirements as set by EN 55013, EN 55020, EN 60555-2 and EN 60555-3, RoHS and WEEE.

Mad Professor pedals carry a 2 year limited warranty.

MAD PROFESSOR - TINY ORANGE PHASER - OWNER'S MANUAL

Thank you for buying the TINY ORANGE PHASER!

THIS IS A HIGH QUALITY PHASER PEDAL DESIGNED BY BJÖRN JUHL.

Unlike most vintage phasers, the Tiny Orange Phaser is especially tuned for electric guitar.

The tone is very musical and balanced thanks to carefully matched parts in the circuit.

With the four controls you can fine-tune the phaser effect to your taste.

With The Mix control you can adjust phaser tones from very mild into deep phase effect.

Speed range and amplitude of the internal oscillator are set to allow high phaser speeds without getting erratic.

You can find classic phasing sounds at about 12 o'clock speed setting, the lower settings produce a nice floating "Vibe" type of sound.

The controls are:

- **SPEED** controls the speed of the modulation
- **RESONANCE** sets the resonance of the effect, making it sharper when increased
- **MIX** mixes phaser effect with dry signal
- **ROTATING SWITCH** switches between two different phaser effects, a deeper and a lighter one

CAUTION!

Never operate the unit with its bottom removed or damage will most likely occur.

POWER REQUIREMENTS:

6F22 9V battery or DC eliminator
2.1 mm plug center negative and positive sleeve.

ELECTRICAL SPECIFICATION:

- Current draw at 9V DC approx. 26 mA
- Input impedance approx. 500K Ohms
- Output impedance approx. 1K Ohms
- Voltage supply range 8V to 10V
- Complete bypass (true bypass) and input of circuit grounded when in bypass
